

COMBAT-19 CAN ELIMINATE A CORONAVIRUS IN 60 SECONDS

COMBAT-19 is a simple to use room and vehicle fogger that can eliminate Covid-19 and other Coronaviruses from the atmosphere and sanitises all surfaces, as per the recommended government guidelines.

- **COMBAT-19** active ingredients are tested to *BS EN 1276*, *BS EN14476* and *BS EN1650* which are recommended by the British Government to kill Coronaviruses.
- **COMBAT-19** eliminates airborne Coronavirus and sanitises all surfaces including door handles, light switches, work surfaces etc.
- **COMBAT-19** helps to reduce time consuming and costly sanitising and decontamination procedures.
- **COMBAT-19** reduces the potential for widespread contamination across rooms and regularly used environments.
- **COMBAT-19** is manufactured in the United Kingdom.

HOW DOES COMBAT-19 WORK?

COMBAT-19 is a highly effective, powerful broad-spectrum germicide.

The product range is one of the most powerful airborne and all-surface sanitiser on the market today.

COMBAT-19 allows you to quickly and easily sanitise an entire average size room, space or vehicle with just the push of a button.

A propellant inside the can sends out a fine mist of powerful, disinfecting active ingredients (*Tested to BS EN 1276, BS EN14476 and BS EN1650*) that disperse throughout the area.

The **COMBAT-19** fine mist gets to work on contact with every surface, eliminating a wide range of germs, including bacteria, yeasts and fungi that can be the cause of bad odours but is also effective against viruses and other harmful micro-organisms.

COMBAT-19 IS EFFECTIVE AGAINST VIRUSES, BACTERIA & MOULD SPORES

Listed below are just some of the many pathogens **COMBAT-19** is effective in combating:

BACTERIA

Bacillus cereus
Bacillus strearothermophilus
Bacillus subtilis
Corynebacterium diphtheriae
Desulphovibrio desulphuricans
Enterobacter aerogenes
Enterococcus faecium
E. coli
Klebsiella pneumoniae
Legionella pneumophila
Leuconostoc mesenteroides
Listeria monocytogenes
MRSA
Mycobacterium smegmatis
Pseudomonas aeruginosa
Pseudomonas cepacia
Proteus mirabilis
Proteus vulgaris
Salmonella choleraesuis
Salmonella typhi
Staphylococcus aureus
Streptococcus faecalis
Streptococcus pneumoniae
Streptococcus pyogenes
Vibrio cholerae

VIRUSES

Adenovirus
Covid-19
Hepatitis B
Herpes virus
HIV-1
Newcastle Disease
Rhabdovirus

ALGAE

Chlorella pyrenoidosa
Chlorella vulgaris
Nostoc commune
Phormidium faveolarum
Phormidium inundatum
Phormidium uncinatum
Scenedesmus obliquus
Scenedesmus vacuolatus

YEAST & FUNGI

Alternaria alternata
Aspergillus niger
Apergillus versicolor
Candida albicans
Chaetomium globosum
Cladosporidium cladosporoides
Coniophora puteana
Coriolus versicolor
Epidermophyton floccosum
Gleophyllum trabeum
Microsporum canis
Microsporum gypseum
Penicillium glaucum
Penicillium verrucosum
Poria placenta
Saccharomyces cerevisiae
Trametes versicolor
Trichoderma viride
